

# Standards for Pesticide Residue Limits in Animal Products

(Amended Date: 2019-11-06 )

1.6 June 2008, Food No.0970400574

2.4 September 2008, Food No.0970404359

3. Amended on August 20, 2013

4. Amended on June 27, 2018

5. Amended on January 28, 2019

6. Amended on November 6, 2019

Article 1 This Standard is prescribed in accordance with the provisions of the second paragraph of Article 15 of the Act Governing Food Safety and Sanitation.

Article 2 The examination of pesticide residues shall include the pesticide itself and its metabolites. Both the MRLs (ppm) and the actually detected residues of pesticides are calculated on the basis of the weights of the products sold on the market.

Article 3 The pesticide residue limits in animal products shall meet the following Table. Not listed in the Table shall not be detected.

Pesticide Name	Tissue	Species	Maximum Residue limit (ppm)	Symbols

Note 1: The offals listed in this table are the edible parts.

Note 2: 「F」 means the maximum residue limit of pesticide of milk products should be calculated below:

- (1) If the fat content of the milk products is less than 2%, the maximum residue limit of pesticide of milk products should be half of the maximum residue limit of pesticide of milk.
- (2) If the fat content of the milk products is equal to or more than 2%, the maximum residue limit of pesticide of milk products should be 25 times of the maximum residue limit of pesticide of milk, expressed on a fat basis.

Article 4        This Standard shall be implemented from the date of promulgation.
